Arslan Khalid

Machine Learning Engineer

arslankhalid.work@gmail.com | LinkedIn | GitHub | WhatsApp | (+92) 341-9507071

Education

B.Sc. Electrical Engineering
University of Gujrat
CGPA: 3.12
Nov 2020 – Jul 2024

Relevant Courses:
- Advanced ML Algorithms by Stanford University
- Supervised Machine Learning by Stanford University
- Django Web Framework by Meta

Skills

Languages:	Python · C++ · TypeScript · SQL
AI Engineering:	LLMs (OpenAI, Claude, Gemini) · AI Agents · RAG · LangChain · LangGraph · Prompt Engineering · Claude Code · LLM Evaluation
Voice & Real-Time AI:	LiveKit · Vapi · Twilio · Deepgram · WebSockets · Audio Synthesis (RVC)
Machine Learning:	PyTorch · TensorFlow · OpenCV · Hugging Face · RL · CV · NLP
Databases & Tools:	PostgreSQL · Redis · Qdrant · Docker · Git · GitHub
Soft Skills:	Leadership · Team Coordination · Critical Thinking · Problem Solving

Experience

- **Zylo Technologies (On-site)** — DHA Phase 6, Lahore
  AI Development Team Lead — *Nov 2025 – Present*
  - Lead teams of 8 to 10 engineers building three production AI platforms (ZARM, Scale Connect, AI-FSL). Own architecture, delivery timelines, and engineering standards.
  - Led a team of 10 to build ZARM, an AI consulting platform that cuts weeks of manual discovery work to a structured 5-day sprint and gives clients a prioritized AI roadmap in one week.
  - Led a team of 10 to launch AI-FSL, a French language education platform used by 2 school districts and 88 teachers. Cut long-term lesson planning from weeks to 2 minutes.
  - Built a real-time Common European Framework of Reference (CEFR) speaking interviewer on LiveKit with sub-700ms latency and highly accurate proficiency results.
  - Led a team of 8 to ship Scale Connect, a property portfolio and financial dashboard that centralizes real estate metrics and generates financial strategy insights with LLMs.
  - Set up CI/CD, testing, and LLM evaluation pipelines across all project teams.

- **Zylo Technologies (On-site)** — DHA Phase 6, Lahore
  AI Engineer — *May 2025 – Nov 2025*
  - Designed the AI architecture for Brewly, a cafe management system live at Taken Cafe in Dubai. Inventory forecasting reached 90%+ accuracy and smart product bundles grew 3pm to 5pm sales by up to 30%.
  - Built an AI drive-thru agent on LiveKit that takes customer orders and sends them to the kitchen with sub-700ms response latency.
  - Built Flossie.ai, a voice front desk assistant for dental clinics on Vapi and Twilio. It answers calls, books appointments, and sends doctor reminders. Live in 10+ clinics.
  - Built an AI meeting notetaker that joins Google Meet, Zoom, and Teams calls and returns transcripts, summaries, and action items.
  - Built EasyGen, a LinkedIn post generator trained on top influencer content, and shipped a companion Chrome extension.

- **GulzarSoft (On-site)** — Gujrat, Pakistan
  Machine Learning Engineer — *Nov 2024 – Apr 2025*

- Built a collaborative filtering model for a car recommendation system that raised recommendation accuracy by 30%.

- **Coders Launchpad (Remote)** Dubai, UAE
  Machine Learning Engineer *Dec 2023 – Apr 2024*
  - Built a voice-to-voice conversion model for the Quran Project using Retrieval-based Voice Conversion (RVC) that transforms user voices while keeping audio quality high.
  - Trained and tuned the voice models for accuracy, pronunciation clarity, and natural sound.

- **Intelligent Systems Lab (On-site)** Gujrat, Pakistan
  Machine Learning Intern *Sep 2023 – Oct 2023*
  - Developed a machine learning model for depth estimation and path planning for an autonomous quadruped robot.
  - Integrated stereo vision cameras and various onboard sensors to enable obstacle detection and real-time navigation.

Projects

- **Stereo Vision Navigation with RL**: Developed an autonomous quadruped robot for path planning and navigation using reinforcement learning. Integrated obstacle detection and avoidance with advanced machine learning algorithms.

- **Jarvis: Real-Time AI Voice Assistant**
  LiveKit, Python, WebSockets, Wake-Word Detection
  - Architected a persistent, low-latency AI voice assistant leveraging LiveKit real-time infrastructure.
  - Trained and deployed a custom "Hey Jarvis" wake-word detection model with 97% accuracy, optimizing streaming connection latency for near-instantaneous conversational responsiveness.
  - Bridged continuous audio streaming with backend AI processing pipelines, enabling seamless and natural user interactions.

- **Cortex: LLM Reasoning Visualization Tool**
  React, TypeScript, Python, FastAPI, WebSockets
  - Built a full-stack tool that tracks, logs, and visually maps the internal reasoning chains of Large Language Models.
  - Shipped a real-time dashboard that displays AI inference steps as they happen.
  - Helped developers debug and audit prompts and agent behavior through visual analytics.
